

Shear Locks

Shear Aligning Electromagnetic Lock

Hidden Strength at Any Angle
with Its Flexible Mounting Options Solutions

GS200

GS705

(Includes door position sensor)

GS250

GS705N

GEM shear locks offer totally concealed mechanism and are designed for applications where the door swings up to a 180 degree. When the shear lock detects the door in the closed position, the magnet “sucks” the armature plate up and traps the armature plate in the lock frame. Generally a 2 -3 mm gap between the top of the door and the frame is optimum for the electromagnet to attract the armature plate and keep the door locked.

The built-in bond sensor indicates proper armature contact, and eliminates potential lock misalignment before the magnet is permitted to energize.

Standard Features

- Suitable for narrow frames, double swing doors and glass doors
- Fail-safe
- Horizontal or vertical installation
- Surface /Mortise/Semi-Mortise mounted
- Bond sensor indicates door is locked or unlocked (GS200 is available with optional bond sensor)
- Adjustable armature screws for wide door gaps
- Special push-off device on armature ensures no residual magnetism

Optional Features

- Mounting brackets available for easy installation (For GS200, GS705-35)

Patents, Approvals, and Listings

- UL listed: BP9692 (GS200, GS200M)
- CE : EC3D0909-02

Shear Locks

Warranty

The product is warranted against defects in material and workmanship while used in normal service for a period of 5 years from the date of sale to the original customer. The GEM policy is one of continual development and improvement; therefore GEM reserves the right to change specifications without notice.
