Smart Hotel Solution

Advanced Wireless Hotel Lock System

Brief Introduction

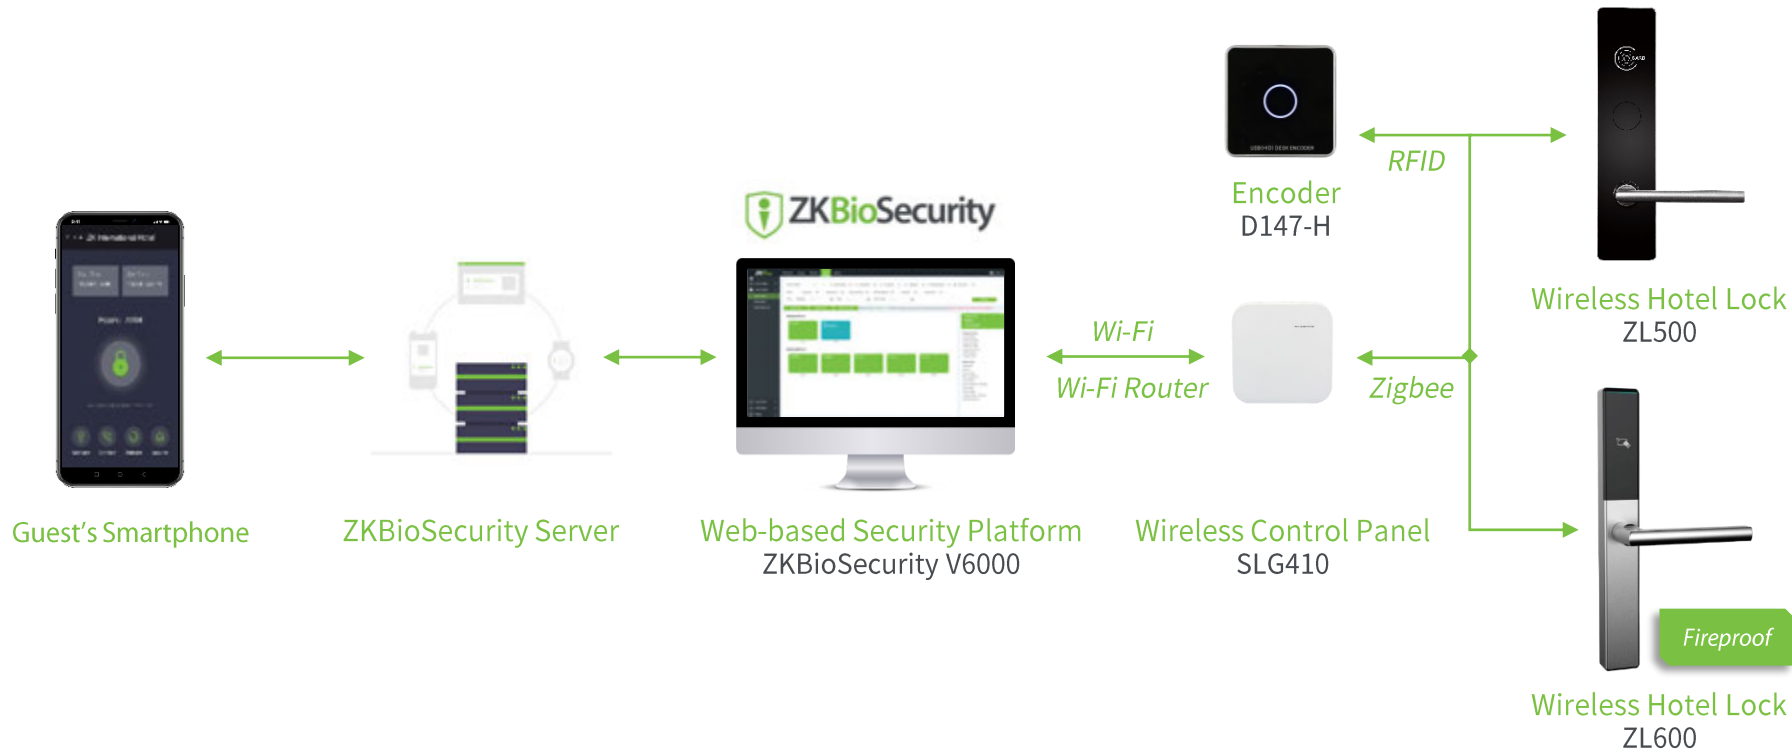

Smart Hotel Solution

Security, efficiency and design have always been critical to hotel industry. To satisfy users' needs, especially the requirements of high-quality wireless door lock system, ZKTeco has been striving for enhancing performance of its hotel door locks. Now, ZKTeco is ready to release the Smart Hotel Solution of Second Generation in improving service levels and guest experience

- *Unique User Experience (Skip front desk - No queues)*
- *Operational efficiencies and guest service*

Configuration

How it Works

Step 1

Booking hotel from
OTA platform

Step 2

Process and reserve room
in the *ZKBioSecurity* platform

Step 3

Receive reservation &
check-in details on SMS

Step 4

Arrive at the hotel and unlock
the door via the smartphone

Step 5

Check the real-time status of
lock and guest's requirements

Highlight Features

Full Control in a Smart Phone

Full Control in a Smart Phone

The solution offers the guests a whole new hotel experience. When they arrive, they can go straight to their guestroom and use their own smartphone to unlock the door

No need for keys or keycards. No need to wait in a queue at the front desk after a long journey. This seamless experience is secure, convenient and saves everyone time

Highlight Features

SMS Notification for Reservation & Check-in

[ZKTeco] Dear Guest, ,Your room No. is 301. Please click the link to get your room key
<https://dllzff.cn/D9YDJ0q4?u=vyiMjaVbUFne>

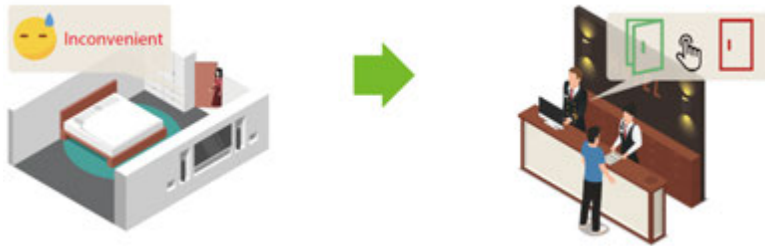

SMS Notification for Reservation & Check-in

The guest makes a reservation from OTA platform, and he/she receives the first SMS notification

After the hotel staff allocates a room, a digital key will be transferred to the guest's smart phone via SMS

Highlight Features

Remote Door Unlocking in Emergency

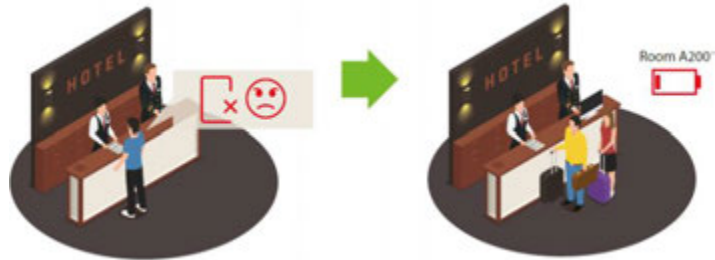

Remote Door Unlocking in Emergency

Hotel staff sometimes may need to open a room's door under certain special circumstances. For example, when a hotel guest forgets to bring the room card, or when a hotel employee loses his or her employee card in a room, or when there is emergency evacuation, the front desk staff can use the software to remotely unlock or lock any room doors

Highlight Features

Battery Status and Access Records Available Online

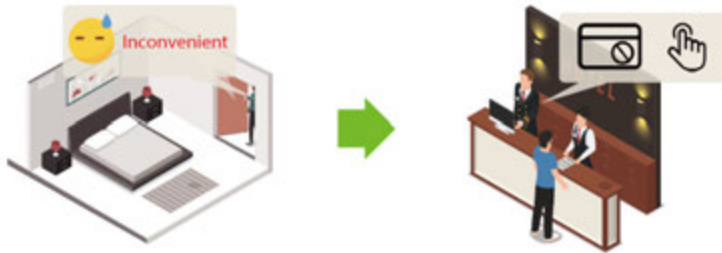

Battery Status and Access Records Available Online

Hotel staff does not need to go to the door of each room and check the power of the door lock as all access records are uploaded to ZKBioSecurity software and can be checked anytime

Highlight Features

Access Hotel Areas with One Hotel Key Card Only

Access Hotel Areas with One Hotel Key Card Only

The front desk staff could set the access permission level of a hotel guest and control his / her access to any facility or secure areas in the hotel, like suites, conference rooms, offices, gyms, canteens, according to the practical situation when a guest has arrived and wants to check-in. Guests can then access those areas with one key card only

Highlight Features

Open API for Software Integration

HotelCardOperation : Hotel Card Operation		Show/Hide	List Operations	Expand Operations
GET	/api/hotel/card/updateLockBlack	Set Hotel Lock Black List And Cancel Black List
